

# Gavrikov Pavel

C / C++ developer, ML engineer

+7 (925) 244-23-89  
gavrikov.pa@phystech.edu

## WORK EXPERIENCE

### Huawei Russian Research Institute, Moscow AI Foundation and Algorithm Lab

JULY 2024 - JULY 2025. Developed Lightweight evaluation of internal memory in next-generation LLMs project, outcomes included a diploma thesis and a conference abstract (under review).

## EDUCATION

### Moscow Institute of Physics and Technology, Dolgoprudny – bachelor / 3 year

SEPTEMBER 2022 – 2025

Department of Radio Engineering and Cybernetics, Applied mathematics and Physics.

### Higher School of Economics, Moscow – bachelor

SEPTEMBER 2021 – JULY 2022

Department: Moscow Institute of Electronics and Mathematics, Information Science and Computer Technology.

## PROJECTS

**Triangles [C++]** — *Effective solution of the problem of intersection of  $N$  three-dimensional triangles using the bounding volumes hierarchy.*

**Matrix [C++]** – *Implementation of a two-dimensional matrix class in C++ for calculating the determinant and working out move semantics.*

**Differentiator [C]** – *The program calculates function's derivative in a particular point 'x' by representing expression in tree structure. Expression was parsed with a recursive descent algorithm.*

Other projects can be found on GitHub.

## ADDITIONAL COURSES

**Advanced computer networks** – *The course covers modern approaches to the implementation of large data transmission networks such as L3VPN, RTBH, BGP, and is in addition to the institute's computer networking course.*

**Introduction to Computer Architecture** – *The course consists of digital circuits basics and general concepts of modern CPUs architecture: branch prediction methods, superscalarity, out-of-order execution and others.*

## SKILLS

- C, C++, Matlab
- CMake, PyTorch, TensorFlow, Matplotlib, NumPy, SciPy, ect.

## PROFESSIONAL INTERESTS

- Large language models
- Compilers design and implementation
- Project management

## LANGUAGES

English (B2), Russian (native), Chinese (elementary)

## GitHub Repository

[github.com/xmickos](https://github.com/xmickos)

## Publications

Gavrikov P.A., Usmanov A.K., Revaev D.Y. Buzykanov S.N.,

Framework for Rapid Evaluation of Promising Architectures of Large Language Models [in Russian].

Mathematical Methods for Patterns Recognition, Murom, 2025
